What's inside

When you are sick or hurt, do you know where to go? See Page 3 to learn the best place to get the care you need.

Preventive care

Healthy start

See your provider for an annual wellness visit

Get off to a healthy start this year by scheduling an appointment with your primary care provider. All members of your family should see their provider once a year for an annual wellness visit.

This visit is a covered benefit under your health plan. During the visit, you will get any screenings or vaccines you may need. This winter, be sure to ask your provider about getting the flu, COVID-19 and RSV vaccines.

Need a new provider? We can help you find one. Call Member Services toll-free at the phone number on Page 4.

Vaccines

Your best shot

Vaccines are one of the best ways you can protect yourself from serious diseases. Vaccines are not just for children. Adults may also be at risk for vaccine-preventable diseases due to their age, job, lifestyle or health conditions.

Influenza (flu) vaccine

All adults should get a flu shot every year. It is available in the fall and winter months.

Tetanus, diphtheria, pertussis (Tdap) vaccine

Adults who never received the Tdap vaccine should get a dose of Tdap. Adults who have received a Tdap shot should get a booster dose every 10 years.

Pneumococcal disease vaccine

Pneumococcal vaccines protect against infections in the lungs and bloodstream. They are recommended for all adults older than 65. They are also recommended for adults younger than 65 who have certain chronic health conditions.

Shingles (herpes zoster) vaccine

The zoster vaccine, which protects against shingles, is recommended for adults age 50 or older.

Mental health

Are you SAD?

Tips for beating seasonal depression

Seasonal affective disorder (SAD) is a form of depression. It occurs during the cold, dark months of winter. Symptoms include sadness, being in a bad mood, oversleeping and weight gain. If you think you have SAD, try these self-care tips:

- **Exercise.** Physical activity has been known to help people feel better and relieve stress. Taking a walk, doing yoga or swimming in an indoor pool can all get your body moving.
- **Spend time outdoors.** Even though the sky may be cloudy during winter, outdoor light can help you feel better. Bundle up and take a walk during your lunch break. If you are stuck indoors, sit close to windows.
- **Take vitamins.** SAD has been linked to not having enough vitamin D. Talk to your provider about taking vitamin D or other supplements.

Illness or injury

Know where to go

When you are sick or hurt, you may not want to wait to see a health care provider. Choosing the right place to go will help you get the treatment you need faster.

When can your primary care provider take care of you?

For most illnesses and injuries, your primary care provider's office should be the first place you call. They may be able to give you advice for at-home care. They may also be able to call in a prescription to your pharmacy.

When should you go to urgent care?

If you cannot get in to see your provider, you could go to an urgent care center. Urgent care centers take walk-in patients for minor illnesses and injuries.

When should you go to a hospital emergency room?

Emergency rooms are for major medical emergencies only.

Cancer screenings

Crush cancer

Screenings to find cancer early

Getting screened for cancer is very important if you are at risk. Finding cancer early makes it easier to treat. Ask your provider about these screenings during your next visit.

Colorectal cancer screening

Colorectal cancer screening is recommended for adults ages 45 to 75. Talk to your provider about the best screening option for you.

Cervical cancer screening

Women between the ages of 21 and 29 should get a Pap smear every 3 years. Then get Pap and HPV tests every 5 years between the ages of 30 and 65. Testing can end at age 65 for women with a history of normal Pap results.

Prostate cancer screening

Men who are between the ages of 55 and 69 should make an individual decision about being screened. If you are in this age group, talk to your provider about screening.

Lung cancer screening

Adults who are between the ages of 55 and 80 should ask their provider about a lung cancer screening if they have a history of heavy smoking and currently smoke (or quit within the last 15 years).
